

Junlan Feng

IEEE Fellow | Chief Scientist, China Mobile Group

Profile

AI scientist and technology leader with nearly 30 years of experience across conversational AI, network intelligence, AI platforms, and safe foundation models. Chief Scientist of China Mobile Group; former Chair of LF Networking, the world's largest open-source networking community. Led the development of the Jiutian AI Platform and foundation-model technologies, supporting 4,000+ production use cases, 30+ enterprise and government clients across 9 sectors, and services reaching over one billion users.

Research :

200+ academic papers; 6,800+ citations; 100+ authorized patents and 200+ pending patent applications; 1 co-authored book

DBLP: <https://dblp.org/pid/36/3948.html> |

Google Scholar: <https://scholar.google.com/citations?user=rBjPtmQAAAAJ> |

ORCID: <https://orcid.org/0000-0001-5292-2945>

Leadership & Impact:

20+ awards; 100+ keynote/invited talks; 4,000+ AI production use cases; 30+ major enterprise deployments

Professional Experience

2021–Present: Chief Scientist at China Mobile Group

2016–2021: CMR Chief Scientist, China Mobile Research Institute

2013–2013: Architect, Big Data Product Line, IBM R&D Center

2006–2013: Principal Researcher, AT&T Labs Research

2001–2006: Senior Researcher AT&T Labs Research

Education

1998–2001: PH.D, Institute of Acoustics, Chinese Academy of Sciences, Thesis: Acoustic models and decoding algorithms in natural speech recognition

1995–1998: Master, Harbin Engineering University, Thesis: Text-independent speaker recognition

1990–1995: Bachelor, Shanxi University of Finance & Economics, Information Science

Research and Technology Leadership

Conversational AI: At AT&T Labs Research, pioneered WebTalk, an early system for automatically building dialogue services from web content. Later led China Mobile's customer-service intelligence program, including the Eva intelligent customer-service system.

Network Intelligence: Led China Mobile's network-intelligence program and key technologies for autonomous networks, supporting the evolution of autonomous-network capabilities and large-scale intelligent operations.

Jiutian AI Platform and Foundation Models: Chief engineer of the Jiutian AI Platform, Jiutian AI middle platform, and Jiutian foundation-model core technologies. The platform supports large-scale AI production deployment across communications, energy, chemicals, aviation, healthcare, government services, and other sectors.

Industrial AI Deployment: Chief technical leader for major AI platform and foundation-model projects with PetroChina, China National Chemical Corporation, Chinese PLA General Hospital, China Eastern Airlines, TravelSky, Gansu Provincial Government, and Heilongjiang Provincial Government.

Selected Honors and Awards

IEEE Fellow (2022)

National Outstanding Scientists — Strategic Scientist (2023)

Jiutian Large Model selected into the Top 10 National Key Foundation Technologies of Central Enterprises, First Principal Contributor

Jiutian AI Team awarded the “Model Central Enterprise” honorary Title (2024; team leader; no more than 10 nationwide each year)

Science and Technology Award for Key Technologies and Large-Scale Application of Autonomous Networks — As First Principal Contributor, First Class Prize, Science and Technology Award of China Institute of Communications)

Jiutian AI Platform for the Communications Industry and Its Application —As First Principal Contributor, Second Prize, Science and Technology Award of China Institute of Communications

Distinguished Keynote Speech — IEEE, IEEE Computer Society, and IEEE Communication Society Technical Committee on Big Data (2019)

AT&T CTO Award (2009; 8 recipients across AT&T).

Multiple China Mobile Group Top Technical Awards: For work on Jiutian AI Platform, Jiutian Intelligent Recommendation Platform, Network intelligence, and Intelligent speech technologies.

Key National Projects in Past 5 Years:

2024–2025, Project Leader, Safety by Design Foundation Models (JT-Safe) , 360+ Researchers

2022-2025, Project Leader, National New-Generation AI Open Innovation Platform, 150+ Researchers and Engineers

2022-2026, Director of Laboratory Council, National Key Laboratory of Multimedia Information Processing, 190+ Members of Technical Staff

2019–2022, Project Leader, Cross-Domain Intelligent Orchestration Plane for Software-Defined Networking

2020–2023, Technical Leader, Human-Computer Interaction Services: Large Scale

Key Enterprise and Commercial Projects in Large scale in Past 3 Years:

2024–2025, Chief Technical Leader, PetroChina AI Middle Platform and Multimodal Foundation Model

2025-2026, Chief Technical Leader, China National Chemical Corporation Industry Model and Platform

2020-2025, Chief Technical Leader, Network Intelligence Transformation of China Mobile

2023-2026, Chief Technical Leader, Jiutian Foundation Models

2020-Present, Chief Technical Leader, Jiutian AI Platform and Middle Platform, China Mobile

2021-2022, Chief Technical Leader, China Eastern Airlines Platform and Foundation Model

2024-2026, Chief Technical Leader, TravelSky AI Platform and Customer Service

2023-2025, Chief Technical Leader, Hospital AI Platform and Capabilities

Professional Leadership

2024-Present: Fellow of Chinese Institute of Communications

2020-2023: Chairman of the Board of Linux Foundation Networking

2020-Present: Board Member of Linux Foundation Networking

2023-Present: Vice Chairman, China Large Model Committee of CCF

2023-Present: Vice Chairman, China Artificial Intelligence Industry Alliance

2020-Present: Deputy Director, AI Committee of Internet Society of China

2023-Present: Co-Leader, Large Model Task Force, National AI Standardization Overall Group

2009-2012: Member of IEEE Speech and Language Processing Technical Committee

2014-2016: Member of IEEE Signal Processing Industrial Relation Committee

2016-2018: China Natural Language Processing Committee

10+ Years of Program committee members/ Reviewers, Major Conferences of ACL, ISCA, ACM, AAAI, ICML, ICASSP, ICLR, NeurIPS, IEEE Transactions, etc.

Selected Publications

1. Robust Sentiment Detection on Twitter from Biased and Noisy Data, COLING, 2010; 1,430+ citations.

2. Network Topology Optimization via Deep Reinforcement Learning, IEEE Transactions on Communications, 2023, 61 Citations, Impact Factor: 8.3

3. Network Meets ChatGPT: Intent Autonomous Management, Control and Operation, Journal of Communications and Information Networks, 2023, 84 Citations, Impact Factor: 4.7

4. Hybrid prompt-driven large language model for robust state-of-charge estimation of multitype Li-ion batteries, 2024, 35 Citations, Impact Factor: 9.78
5. A survey of transformer-based multimodal pre-trained modals, Journal of Neurocomputing, 2023, 65 citations, Impact Factor: 6.5
6. Federated learning over coupled graphs, 2023, 51 Citations, Impact Factor: 7.27
7. A survey on deep learning for cellular traffic prediction, Intelligent Computing (Science Partner Journals) 2024, 52 Citations, Impact Factor: 3.7
8. JT-SAFE-V2: Safety-by-Design Foundation Model with World-Context Data, 2026.6, arXiv:2605.24414
9. Measuring User Influence on Twitter Using Modified K-Shell Decomposition, AAAI, 2021; 123 citations
10. Probabilistic model-based sentiment analysis of twitter messages, 2010 IEEE SLT, 121 Citations
11. A Comprehensive Survey on Long Context Language Modeling, arXiv:2503.17407, 2025, 117 Citations
12. Deep Learning for Medication Recommendation: A Systematic Survey, Journal of Data Intelligence, 2023, 74 Citations

Selected Patents

1. Systems and methods for social media data mining, US10496654B2, 208 Citations
2. Relevance recognition for a human machine dialog system contextual question answering based on a normalization of the length of the user input, US8639517B2, 127 Citations
3. Method of detecting potential phishing by analyzing universal resource locators, US9521165B2, 81 Citations
4. System and method of providing a spoken dialog interface to a website, US8949132B2, 81 Citations
5. System and method using a discriminative learning approach for question answering, US8543565B2, 74 Citations
6. Method and apparatus for automatically building conversational systems, US8718242B2, 61 Citations
7. A State-Aware Adversarial Generative Closed-Loop Scheme, YF2401070
8. A Streaming Noisy Label Detection Method, YF2310321
9. A Decoder-Based Generative Pre-Training Large Model Architecture, YF2309241
10. A Context Orchestration and Management Method for Integrated Development and Operations of Communication Network Software, YF2210005
11. Method, System, Framework, Device, and Apparatus for Holistic AI, YF2207055
12. A Planning-Based Robust Multi-Action Dialogue Policy Model and System, YF2110069
